Key Selling Points - Coincides with the release of IIS6, the latest version of the Internet Information Server, due around March 2003. This is a significant upgrade with improvements made in security, scalability and performance, key issues for developers - Also, coincides with Microsoft's latest marketing push for the release of the Windows .NET Server 2003 family, which includes the Internet Information Server - Adoption of IIS6 and the Windows .NET Server 2003 family is virtually guaranteed as the new licensing system introduced by Microsoft means most businesses have paid for the upgrade already - Unlike competition, this title addresses the needs of the programmer rather than the administrative requirements of IIS6, covering what the impact of IIS6 and its new features will have on web application development
